

How are they all connected?

Even though ecosystems are different, they are linked through:

- The water cycle
- The food chain
- Climate and weather

Activity 3: Build a mini ecosystem (terrarium):

Gather soil, small plants, tiny insects, flowers and place them in a clear jar to create your own ecosystem!

Thinking beyond...

What would happen if you added too much water in the jar? Discuss in pairs and share your thoughts with the class!
