How do we know 610–619 is the 7th century?

Think of centuries as groups of **100 years**:

- **1st century** = 1–100
- **2nd century** = 101–200
- **3rd century** = 201–300
- **4th century** = 301–400
- **5th century** = 401–500
- **6th century** = 501–600
- **7th century** = **601–700** ✅

So **610–619** falls between **601 and 700**, which means it is in the **7th century**.

What does "second decade" mean?

A **decade = 10 years**.

The 7th century can be divided into decades:

- 1st decade → 601–610
- **2nd decade → 611–620**
- 3rd decade → 621–630

So, strictly speaking, **611–620 is the second decade** of the 7th century.

If the timeline gives the Sutton Hoo burial as **around 620**, the answer would be **the second decade of the 7th century**.
